

Stack turner

Palletizer for stacked solar modules, easy change-over to shipping pallet

- Easy change-over of stacks to shipping pallet
- Version for turning over long or short side
- Integrated anti-tilt mechanism retains pallets
- Integrated stack guide
- Suitable for all electrical drawbar fork lifters
- Charging from two sides

Description:

The stack turner turns with the inserted shipping pallet by 90° and is ready to take a module stack.

An integrated anti-tilt mechanism keeps the vertical shipping pallet in position. Your electrical fork lifter puts the pallet with the module stack onto the stack turner table.

When turning back, the stack is placed on the shipping pallet. The anti-tilt mechanism keeps the stack in position while it turns without interfering with pallet handling.

Production example:

module	6 x 10
stacking height	800 mm
system pallet	length / width / height 2000 / 1000 / 140 mm
available space	length / width / height 2,15 / 1,7 / 2,6 m

Options:

- shipping pallet dispenser for high throughput
